

Understanding the Active Sessions Report

The Active Sessions Report lists all users (admins as well as clients) currently logged in to your Ubersmith instance. For each logged in user the user name, full name, and IP address are displayed as well as the day and time that they most recently logged in and the total length of their current session. For admin users with the appropriate access, next to each active session will be a 'remove' link. Clicking this will end the session of the user logging them out of the system. The user will be prompted to log back into the system the next time they attempt to access a part of Ubersmith.
