

Logging Into Ubersmith

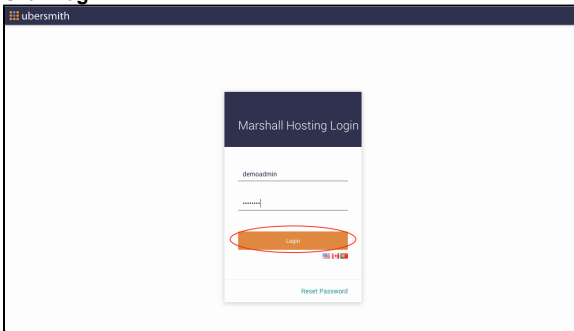

There are two methods for logging into Ubersmith. The first is an initial login, and the second method includes an initial login followed by two-factor authentication, which adds an extra layer of security. This topic contains both methods.

Access the Login Page

- From an Internet browser, navigate to your Ubersmith URL (web) address. The Ubersmith login window appears.

Complete the Login Page

- In the **Username** field, enter your Ubersmith user name.
- In the **Password** field, enter your Ubersmith password.
- Select the appropriate language flag, if you want to [translate your interface](#) to that language.
- Click **Login**.

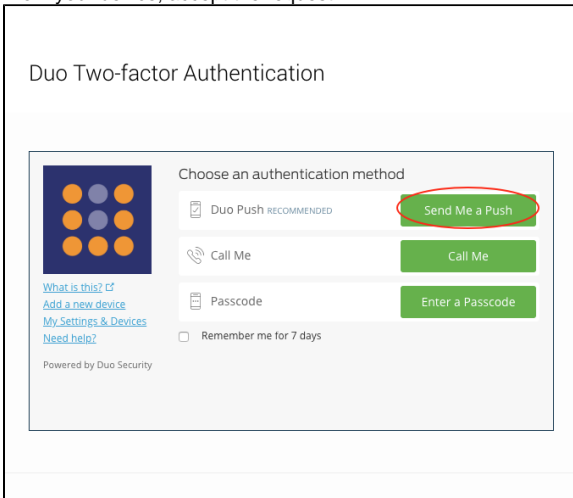

The Ubersmith Dashboard appears.

Using Two-Factor Authentication

When logging into Ubersmith, you can add an extra layer of security, called two-factor authentication. Before you can log in using two-factor authentication, you must first [add a two-factor module](#). After completing the initial Ubersmith login, you are prompted to log in using your configured two-factor module. The steps vary based on which multi-factor application.

- Log into Ubersmith. The two-factor authentication window appears.
- Select the appropriate method to receive your authentication code. Push is recommended. An authentication approval request is sent to your device.
- From your device, accept the request.

The Ubersmith *Dashboard* appears.
