

Configuring Add Services Order Module

When the module runs, it sets any service that has been added to either pending, so you can delay billing until the service is in place and ready or active. The requested services are created from the details of the order.

- In the **Default Service Status** field, select **Active** to immediately begin billing or select **Pending** to wait for other actions to complete.

Note

If you select Pending, running the [Active Service order module](#) later will set the service to active and begin billing.
