

# Configuring Check Fields Order Module

When the module runs, you can validate the answers for up to 10 predefined fields in the order. The order process halts until the answers are validated.

1. In the **Test Name** field, enter the name of the question.
2. In the **Field** field, enter the specific system variable names of the fields in the order to be checked, such as first, last, company.
3. In the **Regex** field, enter the possible answers as a regular expression.
