

Adding Appliances

You can add any appliances you have, so Ubersmith's Device Manager can connect to them. Appliances are used by device modules that can be configured to manage different aspects of your network. Appliances monitor your network hardware via SNMP and collect data like bandwidth, power and environmental statistics from your datacenter.

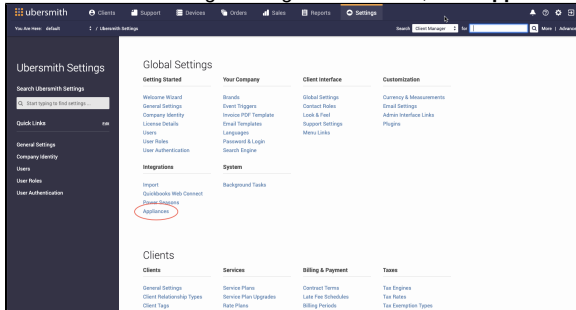

Access the Appliances Page

1. From the *Ubersmith Dashboard*, click **Settings**.

The *Ubersmith Settings* page appears.

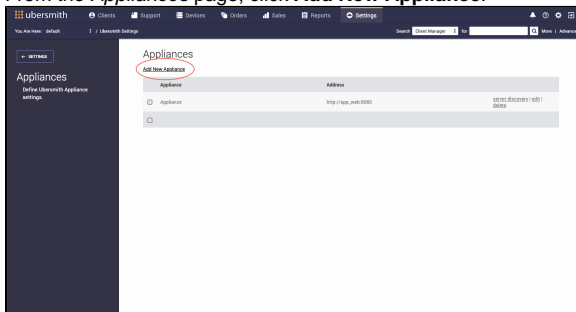

2. From the *Global Settings – Integrations* section, click **Appliances**.

The *Appliances* page appears.

Complete the Add Appliance Page

1. From the *Appliances* page, click **Add New Appliance**.

The *Add Appliance* page appears.

2. In the **Name** field, enter the name of the appliance.
3. In the **Address** field, enter either the IP address or the hostname.
4. In the **Username** field, enter the appliance's username.
5. In the **Password** field, enter the appliance's password.

6. Click **Save**.

The screenshot shows a web interface for 'ubersmith' with a dark blue header. Below the header is a section titled 'Add Appliance'. This section contains four labeled input fields: 'Name' with the value 'Appliance', 'Address' with 'http://app_web:8080', 'Username' with 'ubersmith', and 'Password' with 'ub3rsm1th'. At the bottom right of the form, there are two buttons: 'Save' and 'Cancel'. The 'Save' button is circled in red.
