

Configuring AVS Check Order Module

When the module runs, it checks whether to block certain [address verification system \(AVS\) codes](#). These codes are returned by credit card gateways and indicate the likely validity of the client's address.

- In the **Block Codes** field, enter the AVS codes, that when returned will stop the order process. Enter multiple codes separated by commas.

The screenshot shows the 'Add Order Action' configuration page in the 'ubersmith' interface. The page has a dark blue header with the 'ubersmith' logo and the title 'Add Order Action'. Below the title are three tabs: 'Details', 'Prereqs', and 'Config'. The 'Config' tab is currently selected. In the main content area, there is a label 'Block Codes:' followed by a text input field containing the letter 'N'. At the bottom of the page, there are three buttons: 'Save', 'Save & New', and 'Cancel'.
