

Configuring Order cPanel License Order Module

When the module runs, a license for cPanel is created and associated to the client. It runs a query on cPanel's API and returns the groups and packages relevant to your account.

1. In the **cPanel Manage User** field, enter your cPanel server user name.
2. In the **cPanel Manage Password** field, enter your cPanel server password.

Note

The Order cPanel License order step asks you to enter the IP address to license and select the group and package to use. You will also need to confirm that the license is not violating U. S. export regulations, as well as select to force creation of the license.
